Investment Opportunities In Iraq: Examples Across Sectors

Investment opportunities in Iraq are tremendous varying in type, amount, scope, sector, purpose, and structure. Potential investors have a virtual open landscape to develop projects that will fill the needs of Iraq's expanding and demanding population. Being located in the center of many historic and new middle-east trade routes provides an undeniable advantage; combined with a variety of natural resources and a desire for advanced quality of life equates to many opportunities for builders, suppliers, transporters, developers, producers, providers, manufacturers, servicers, and financiers will find many avenues in which to establish new relationships, build new operations, create new markets, and develop new business connections which are mutually beneficial.

We have collected examples of investment opportunities and provide them below as examples of the significant diversity of opportunities available in Iraq. These opportunities are divided into two major sections: Those identified and sponsored by the various central government ministries and those mapped out by the provinces. The opportunities presented below are not meant to be definitive rather they are provided as a sampling of the rich variety and scope of possibilities for business development in Iraq. The lists are provided as a beginning point for further discussion and amplification concerning details and structure as well as opportunities to engage in a dialogue with various Iraqi counterparts to further discern how perspective opportunities may be developed into plans and projects. You will notice that included in the list are opportunities to partner with various Ministries as well as Greenfield prospects, each with unique investment outlooks.

We invite you to review the provided lists and welcome your further inquiries at any level concerning the sample investment opportunities. You are encouraged to bring us your ideas, proposals, perspectives, and plans; you will find us ready to listen and work with investors in developing constructive and rewarding ways to accommodate those that wish to positively contribute to the future economic prosperity of Iraq and its people.

Regards,

Dr. Sami Al-Araji, Chairman

Iraq National Investment Commission

1- General Information

- The Geographical Position

Iraq occupies distinguished position connecting Asia, Africa and Europe. It also represents the shortest route between the Indian Ocean and the Mediterranean Sea, and which is what made it an important axis in the world. Its importance increased after the discovery of oil which Iraq owns the second largest certified reserve of. In Iraq flow two great rivers, these are the Tigris and Euphrates, where the length of Tigris River is 1,850 Km and it springs from Turkey. The length of the Euphrates reaches 2,350 Km and also springs from Turkey. The streams of the Tigris and Euphrates meet near the town of Qurna to form the river known as Shet-el-Arab whose length reaches 185 Km and flows into the Arab Gulf, which represent the sea stretch for Iraq. Iraq is also distinguished in the variety of its geographic environment which includes level sedimentary plains and mountains. The variety of the weather has given Iraq the characteristic of cultivating many crops all the year round. Iraq is surrounded by countries whose total population amounts 170 Million.

- The Area

The area of Iraq amounts 434128 Sq. Km. and its capital is Baghdad. The largest main cities are Mosul, Basra and Erbil (the capital of the Kurdistan region). Iraq has boundaries with six countries, these are:

Syria: 600 Km

Jordan: 178 Km

Saudi Arabia: 812

Kuwait: 195 Km

Turkey: 377 Km

Km Iran: 1300 Km

2- The Most Important Natural Resources & Their Geographic Distribution:

There are various raw materials available in Iraq from multiple geographic sources. Most of them are of wide geographic distribution which allows for a degree of flexibility in choosing locations. There are many raw materials still not exploited optimally.

2- The Most Important Natural Resources & Their Geographic Distribution:

- Oil:

The certified oil reserve in Iraq is estimated at (115) billion barrels. The undiscovered oil reserve is more than fixed, and thus Iraq is considered to have the second largest reserve in the world after the Kingdom of Saudi Arabia. These estimations indicate that the reserve of the Iraqi oil reaches 300 billion barrels.

- Natural Gas:

The fixed reserves of the Iraqi gas roughly amounts to about 112 trillion cubic foot (1.3 trillion cubic meters), thus Iraq possesses 8.1% of the fixed world reserve of natural gas. With this level of reserves, Iraq ranks tenth in the world among the countries rich in natural gas.

2- The Most Important Natural Resources & Their Geographic Distribution:

- Sulphur

Al-Mishraq Sulphur fields in the Nineveh Governorate are considered the largest of their kind in the world from the aspect of fixed reserves. There is another source of sulphur in Iraq produced by desalting the associated gas of oil. Sulphur is considered the base of chemical industries in the world and is used in Iraq for producing Sulphuric Acid, Phosphate fertilizers and agricultural sulphur.

- Phosphate

Iraq comes in second place in the reserves of industrial phosphate in the world. These raw materials are found in the district of Akashat in the Anbar Governorate. The Iraqi phosphate raw materials are considered to be of medium quality from the aspect of the contents of Phosphor and needs concentration processes to be used industrially.

2- The Most Important Natural Resources & Their Geographic Distribution:

- The Depository Iron:

The raw materials of depository origin iron in the western desert in the Anbar Governorate are considered of weak quality due to the presence of sand and mud impurities. It needs concentration to extract iron minerals from them in order to use them in the iron and steel industry but now they are used in the manufacture of resistant cement.

- Kaoline

Iraq is one of the richest countries in the colored and white Kaoline muds. These muds are concentrated in the western desert (Anbar Governorate). These muds are used in the manufacture of white cement, ceramics, thermal materials, electric isolators, porcelain filters and crucibles for melting metals.

2- The Most Important Natural Resources & Their Geographic Distribution:

- Bauxite

It is one of the raw materials that have been newly discovered in Iraq in the western desert (Anbar Governorate) and its quality is suitable for producing fire bricks.

- Limestone:

Widespread rocks in Iraq, within the regions of the Euphrates basin and the western desert. It is used in the cement, paper, iron and steel, glass and rubber industries.

2- The Most Important Natural Resources & Their Geographic Distribution:

-Dolomite:

It is found abundantly in the western desert and is used in the production of magnesium thermal brick and in the glass and iron industry.

Silica and Quartz Sands:

They are found abundantly in the western desert and were used in the industries of glass, ceramic and thermal materials. They are used in Iraq for producing Silica powder for the purpose of oil drilling. The quartz is presently used for producing the lining of smelters and furnaces for acids.

2- The Most Important Natural Resources & Their Geographic Distribution:

Gypsum:

It is found abundantly in the middle and north of Iraq and is used in the production of plaster and in a lesser degree in the cement industry.

Gravels and Sands:

Al-Nibae site represents the most important site for the existence of gravel. While the sands are concentrated in Karbala and used in the production of concrete for the underlying bases of roads, while the sand is used for producing thermal stone, limes bricks and other constructional uses.

3- The Economic Indicators

The Gross Domestic product (GDP): 131 billion dollars (estimate in 2008). The share of each individual in the gross domestic product is \$4360 (estimate in 2008).

Inflation rate: 6.8% (2008).

Rate of Exchange: \$1 USD = 1170 Iraqi Dinar.

The active population economically: 16.4 million (estimate in 2009)

Oil – The proven reserves: 115 billion barrels (estimate in 2008)

Oil – Production: 2.4 million barrels / day (estimate in 2008)

Oil – Exported: 1.8 million barrels / day (estimate in 2008)

National Gas: Proven reserves: 112 billion cubic feet (estimate in 2008)

3- The Economic Indicators

The Banking System:

The banking sector in Iraq consists of forty three banks in addition to the Central Bank of Iraq. They are distributed according to ownership into (7) governmental banks (23) Private Banks, (7) Islamic Banks and (6) foreign banks. Investment law No. 13, 2006 has excluded the investment in the banking sector from its provisions, however the investment in the banking sector taking its legal form according to the laws of the Central Bank of Iraq No. 56 for the year 2004 and the banks laws No. 94 for the year 2004. The minimum amount for establishing a bank in Iraq is 100 Billion Iraqi Dinars. (I.e. around 85 million dollars)

4- The legal Environment Regulating The Investment In Iraq. The Business Of Investment In Iraq Is Regulated By A Set Of Laws, The Most Import Of Who Are: **First: Industrial investment law for the private mixed sectors No. 20, 1998, this law aims to do the following:**

- 1) Encourage industrial investment in the private and mixed sectors and developing their activities.
- 2) Providing the flexibility and the means of support for the sectors referred to in clause one of this article, to ensure their participation in accelerating the levels of industrial development and the growth of the natural income progressively.
- 3) Regulation and supervision of the state or industrial projects.
- 4) Determining the regulations of granting financial aids and exemption to ensure coordinated and balanced industrial development within the framework of the development plan.

The project obtaining the license according to provisions of this law enjoys the following exemptions and privileges.

- 1- The industrial projects existing before the date of entering into force of this law are exempt from all taxes and duties except income tax and the production fees imposed on the production of cigarettes, beer and liquors including the share of the workers determined according to the law of distributing the profits in the companies No. 101, 1964 for a period of five years as of the date of validity of this law together with observing clause three of this article.

2- The industrial projects which obtain the foundation license after the entering into force of this law are exempted from all taxes and duties except income tax and the production fees imposed on the production of cigarettes, beer and liquors in including the share of the workers determined according to the law of distributing the profits in the companies No. 101,1964 for a period of 10 ten years as from the date of granting them the foundation license together with observing the provisions of clause three of this article.

3- In addition to what is mentioned in clauses one and two of this article, the industrial project obtaining the foundation license enjoys the following exemptions: 1- The annual profits of the project are exempt from income tax according to the percentages shown below of the net profit for a period of five years and from the year in which it is realized or profit for it after obtaining the foundation license or from the date of entering into force of this law for the projects existing before its validity and in half those percentage in the next five years following the first five years.

A-Ten percent for the projects owned by individuals or belonging to companies except the shareholding companies in the developed cities and (20%) twenty percent in the less developed cities or countryside and remote villages.

previous

B-Fifteen percent for the projects belonging to shareholding companies (except the mixed shareholding companies) in the developed cities and (25%) twenty five percent in the less developed cities, countryside and remote villages.

C-Twenty percent for the mixed sector companies in the developed cities and (30%) thirty percent in the less developed cities, countryside and remote villages.

4-The retained reserves from the profits of the project allocated to develop and expand from income tax in what does not exceed twenty five percent of its total annual profits before calculating the tax together with observing the following:

A-If the reserve amounts exempt from income tax are not used in developing or expanding the project within five years as from the date of allocating them for the mentioned purposes are added to the profits of the year next to the expiry of the five years period for the purpose of calculating the income tax.

B-If these amounts are used in developing or expending the project within the period shown in A of this clause then they are not subject to tax and it is possible to increase the capital of the project due to that amount itself.

Contents

ARABIC

<http://www.investpromo.gov.iq>

5- The Council of Ministers may grant the strategic industrial projects or of the special nature and the projects established for export purposes depending on local raw materials and the projects contributing in the transfer of developed technology of Iraq and eliminate the economical and industrial suffocations occurring on the foundation license additional exemption, determined for each case in addition to what is mentioned in clause three of this article.

6-The planning commission undertakes the determining of developed cities, the less developed cities, countryside and remote villages for the purposes of this law.

Second: the private investment law in the refining of Crude Oil No. 64 for the year 2007.

This law aims at encouraging the private sector to participate in the economical development in Iraq and contributing in building the free crude industrial base through entering in the activity of refining oil. The project obtaining the investment license according to provisions of this law enjoys the privileges determined for the projects established in the districts.

Third: Companies law No. 21 for the year 1997

This law aims to:

- a. Organize the Companies.
- b. Protect creditors from fraud.
- c. Protect shareholders from conflict of interests and from the misconduct of those responsible for the company and the owners of the majority of shares in it and those controlling its affairs actually.
- d. Enhance the provision of complete information for the staffing related to decisions affecting their investments and company.

As far as the matter is related to foreign investment it is necessary to represent the foreign companies through a branch or office in Iraq. The procedures of opening the branch or office are subject to the provisions of regulation No. 5, 1989 (regulation of the branches and offices of the foreign companies and economical establishments).

Fourth: Law of state companies No.22 for the year 1977

This law aims to organize the state companies in foundation, management and liquidation in unified financial and administrative provisions and principles to achieve highest level of growth in work and production and depending the principle of economical account, the efficiency of exploiting the public funds and their effectiveness in achieving the aims of the state and raising the performance levels of the national economy. It is possible to benefit from the text of articles 15 and 35 as it is related to participation with other sectors and transformation from one sector to another to benefit from the privileges of the investment law.

Fifth: The law of Regulating the insurance Business no. 10 for the year 2005.

According to this law the insurance board was founded which undertakes according to the provisions of article 6 of the mentioned law regulating the insurance sector and supervising it in what ensures developing it and providing financially open, transparent and safe market, enhancing the role of the insurance industry in insuring persons and properties against risks to protect the national economy and to gather the national savings and develop and exploit them to support the economical development. In order to achieve that it may perform the following tasks:

[previous](#)[Go to main table](#)[next](#)[Contents](#)[ARABIC](#)<http://www.investpromo.gov.iq>

- 1- protecting the rights of the insured and benefiting from the insurance business and supervising the financial ability of the insurers to provide insurance cover enough to protect those rights.
- 2- Raising the performance of the insurers, their efficiency and oblige them in the rules of practicing the profession and its ethics to increase their ability to provide better services to the beneficiaries.
- 3- providing human efficiencies qualified to practice the insurance business including the establishment of institute for this purpose.
- 4-Developing the insurance awareness and preparing studies and researches related to insurance business and publishing them.
- 5- strengthening the links of cooperation and integration with the sides of organizing the insurance sector on the Arab and international levels.
- 6- Any other tasks related to the insurance sector suggested by the president of the board and agreed upon by the Minister to organize the insurance market.

Sixth: Law of Regulating the Business of Banks No. 94, 2004

This law aims to:

- 1- The main organizational purpose of this law is maintaining the confidence in the banking system and the other organizational purposes include enhancing the general understanding of the banking system by providing suitable information and maintaining suitable degree of protection for depositors and assisting in limiting the financial crimes including fraud, money laundering and financing terrorism.
- 2-The Central Bank of Iraq performs its functions in a way consistent with its organizational aims. Any procedures taken by any governmental institutes other than the CBI affect matters that fall under its authorities and will not hold any legal validity.

No doubt that developing the banks and raising the level of their performers and raising the quality of services which the banks provide have positive effect on investment.

Seventh: The law of leasing the lands of Agrarian Reform to Agricultural Companies and Individuals No. 35, 1983. It has come in the necessitating reasons to enact this law that since there were many agricultural lands not explored and in excess of the needs of farmers and leaving its agriculture will result in great loss in the national wealth especially the reclaimed lands which saw a lot of money being spent on their reclamation.

In keeping with the requirements of the optimal scientific and economical investment and in order to provide the opportunity before the companies and individuals to maximize the land potential in agriculture to increase the production and consequently increasing the national income.

Therefore this law endeavors to encourage investment in the agricultural sector and then reacts positively with the investment law provided. It is necessary to eliminate the contradiction between those laws especially what is related to the highest limit of the exploited area.

Introduction

Iraq is presently moving toward attracting foreign investments to rehabilitate the existing industrial establishments and constructing new establishments. We think that investment in the Industrial Sector in Iraq is useful economically because its basic requirements of natural and human resources and a promising market are available.

The projects and investment opportunities in the Industrial Sector in Iraq which are offered by the Ministry of Industry and Minerals are divided into two sectors and they are: the investment opportunities (new construction) and the investment opportunities (Rehabilitation) for the current establishments

Bab Al-Shaikh – Total area: 100 000 M² Project of Developing Abu Nuwas

District of project: the district is extended to the distance of 305 Km on the length of Tigris River starting from Al-Jamhuriya 8 ridge to end of residential apartments in Al-Karrada district with a total area with the limited of 170 hectare. The district contains and in which Al-Saadoon street forms the main center of the movement in it four main sectors and they are the river elevation, Bataween, Elwiya and Al-Karrada and the river elevation forms the most important parts of the previous project and the center of the current project.

Development Planning.

The planning development stipulates a complete general undertaking for all districts of Abu Nuwas and because the district is wide, the present project is limited on the sector of the river elevation which its area is 54.5 hectare.

In contrary to the previous planning which proposed the construction of cultural buildings with the area of 13.7 hectare, we see that the river elevation to be on open and the constructions do not exceed in it the rate of 10%.

It is necessary that the planning shall include the following:

- 1.To provide the public with open spaces and using the limited categories of trees and finding gardens with a special style and with a total area of 49.5 hectare.
- 2.To arrange the river side through the grading of the side with several levels and execute the various entertaining activities and cultural and with the area of 5.45 hectare.
